

# USDTZ – Whitepaper Lite v1.2

Document Version: v1.2

*Last Updated: 18 September 2025 (Europe/Rome)*

---

## 1) Overview & Use Case

USDTZ is a BEP-20 token with a 1:1 peg to USDT, focused on exchange and settlement use-cases on BSC. A single PancakeSwap v2 pool serves as the canonical market to keep routing simple, transparent, and low-friction.

## 2) Technology

- Network/Standard: BNB Smart Chain (BEP-20)
- Contract: 0x5a90Ec8873969982b82B80d246F70898c0b6A0BC
- Mint enabled (not revocable) with controller  
0xFA4C56bC42C78816B7622f8d4EecF1caAd89fDb4
- Transfer tax/reflection: none
- Decimals: 18

## 3) Tokenomics (100B total supply)

- Current total supply on-chain: 100,000,000,000 USDTZ
- Historical path: 1B at deployment, +50B mint, +49B mint

Buckets (policy intent) — addresses will be published once assigned:

Bucket	Allocation	Amount (USDTZ)
Operational Reserve	60%	60,000,000,000
Collateral & Training	25%	25,000,000,000
Marketing & Partnerships	10%	10,000,000,000
Development & Audit	5%	5,000,000,000

## 4) Peg & Liquidity

- Canonical pair: PancakeSwap v2 USDTZ/USDT –  
0x6cad41d0Ac6EEAc92B0aF5d1E1d77be3D0273714
- LP lock: none (as of publication)
- Rebalancing operations as needed to maintain peg.

## 5) Governance & Transparency

**Transparency hub:** <https://usdt-z.cloud/transparency>

- Circulating supply: totalSupply\_onchain – excluded.
- Excluded: treasury/bucket wallets (once assigned), minter/admin, burn/dead. LP is included since it is not locked.
- Public registry CSV with addresses, categories, locks, and notes.

## 6) Disclaimer & Contacts

- Not affiliated with Tether; not related to “USDtez (Tezos)”.
